

The TrAM project

- and the successful delivery of the world's first fully electric fast ferry

Mikal Dahle, Kolumbus
Project Manager - TrAM

Kolumbus

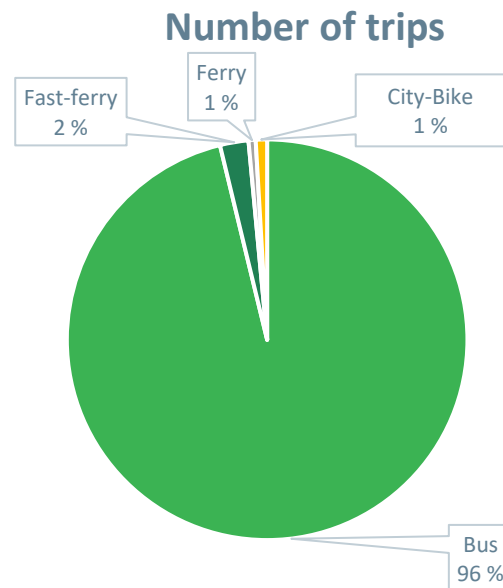

Public mobility company operating public transport in Rogaland county

Why do we focus on high-speed ferries...?

Kolumbus operations and emissions in 2021:

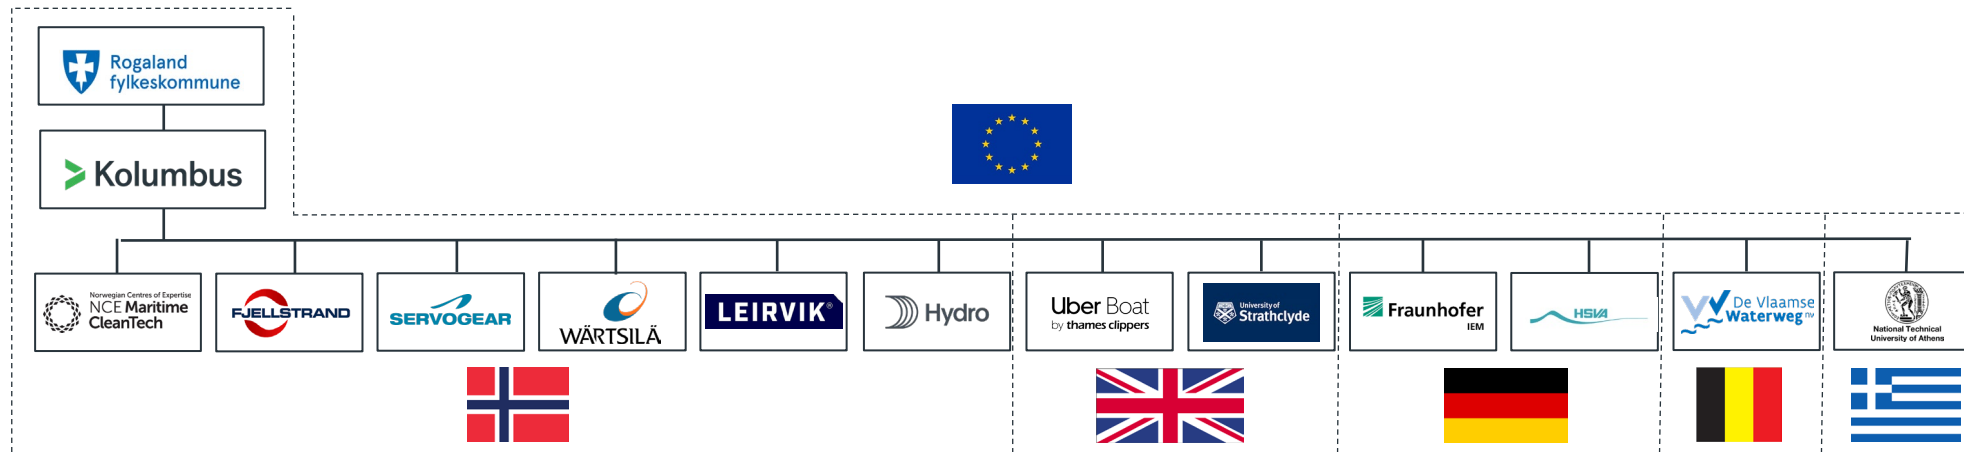

Reduced CO₂ footprint from « Medstraum »

Overview – TrAM

EU H2020 project:

- 13 European partners
- Budget is 15 mEUR, and 11 mEUR is funded by EU
 - «Medstraum» is funded with 3-4 mEUR
 - Rogaland county council is funding the remaining costs for «Medstraum»
- Main goal to develop modularized methodology for design and production
 - Target to reduce total costs for similar vessels by 25%

«Medstraum»

Main achievements:

- Proved that electric fast-ferries are possible
- Optimised weight and efficiency through both design and production
 - Extremely high propulsive efficiency achieved (~80%)
- Battery rooms placed on deck level:
 - Allows for full optimization of the hull shape for propulsive efficiency
 - Meets all new operational and safety requirements for battery rooms

«Medstraum» sailing from yard

Passenger area

«Medstraum»

Key data:

- Length = 30 m
- Pax = 147 (+20 bikes)
- Service speed = 23 kn
- Maximum speed = 27 kn
- Engine capacity= 2 x 550 kW
- Battery capacity = 1524 kWh
- Classed to DNV X 1A - HSLC Passenger, Battery Power, Shore Power – R5-NOR
 - In accordance with HSC code 2000 category A vessel
- Total route lengths = 10 – 22 nm

Engine room

Charging infrastructure

Charger:

- Flexible and scalable charging infrastructure
- Total capacity of 8 MW
- Standard CCS2 plugs used to increase flexibility

New trafo- and converter building

Wartsila converters
